 - For businesses and agencies \$33 / month
 - 600,000 words/month
 - 25+ Languages

ChatGpt (Open AI) :

OpenAI created ChatGPT, a conversational AI model. It is a subset of the GPT-3 transformer-based language model (Generative Pretrained Transformer 3). It is capable of generating human-like text responses to natural language queries after being trained on a large corpus of text data. The model has been fine-tuned for text generation tasks such as sentence and paragraph completion, as well as generating entire articles based on given prompts.

Features:

- Natural Language Understanding: ChatGPT can comprehend and interpret natural language input from users.
- Text Generation: It can generate human-like text responses to user queries and prompts.
- Contextual Understanding: ChatGPT can maintain context during conversations, allowing for more coherent and relevant responses.
- Multilingual Support: ChatGPT can interact with users in multiple languages, facilitating global communication.

Cons :

- Complexity
- Cost

Pricing :

- GPT-4 :

Model	Input	Output
• 8K context	\$0.03 / 1K tokens	\$0.06 / 1K tokens
• 32K context	\$0.06 / 1K tokens	\$0.12 / 1K tokens

- GPT-3.5 Turbo :

Model	Input	Output
• 4K context	\$0.0015 / 1K tokens	\$0.002 / 1K tokens
• 16K context	\$0.003 / 1K tokens	\$0.004 / 1K tokens

Alternative :

- Azure Chatbot AI
- Copy.ai
- WNR.ai

Conclusion :

In conclusion, the research on AI chatbots has shown significant advancements and promising potential in various domains. The provided AI's does not indicate any AI chatbot that supports direct integration with a MySQL database. This means that neither Cody AI nor Blitso.ai or other AI chatbot currently offer native support for using data from a MySQL database as part of their training process or for real-time interactions. These chatbots have proven to be versatile tools with applications in customer support, education, content creation, and more.
